

Your Guide through Information Security

with Actionable Solutions for Your Technology Needs

Caliber Security Partners is a full-service information security company that delivers a variety of solutions for technology companies. From SaaS/PaaS to components in traditional on-premises environments, we are experienced in helping our customers identify risks, improve operations, and protect against vulnerabilities at every level. Caliber is skilled in ensuring our customers have the appropriate security controls, that their employees are well-trained in security, and that there's a plan in place to quickly and effectively deal with any potential issues.

SERVICES FOR TECHNOLOGY COMPANIES INCLUDE:

Network & Systems

- Vulnerability Scan & Review
- Structured Assessment
- Secure Architecture & Network

Mobile & Applications

- Vulnerability Scan & Review
- Secure Code Process & Tooling

Continuity & Recovery

- Incident Response Support
- Enterprise DR Planning & Integration

Staffing & Training

- Information Security Training & Awareness

Strategy and Governance

- GRC Advising & Roadmap
- Policy, Compliance, & Business Enablers

Case Study

The Challenge

The client is a cloud software service provider that was building a tightly secured, cloud-based platform to provide virtual desktop services for the US military. They needed to ensure a high level of security, but the client was new to some of the military security measures, and didn't know exactly what needed to be implemented. Additionally, the client needed a faster turnaround on implementing the scope of the work, and did not have the staff required.

The Solution

The client was concerned about FedRAMP and CMMC compliance regulations required for military projects, as this was a key requirement in the scope of the project. First, Caliber Security Partners narrowed

down the CMMC requirements, because it turned out the client already had FedRAMP mostly covered. The second part of the project involved the mapping of the security controls that the client had in place and what they needed to build, in order to provide these applications and operating environments to their customers. Lastly, Caliber helped augment the client's staff as they needed faster response getting this project up and running.

The Results

Caliber built the roadmap for the client, so they could start lining up their specific network operation center and their system administrators. Caliber also brought clarity on which of the 400 controls applied to the them, and completed the list of required security

controls. This allowed the client to start building virtual machines, loading applications, and to start operating the environment. In a relatively short period of time, Caliber took the client from not knowing exactly what to do, to the building of a compliance roadmap, and onboarding of the process, and now they're able to sell to the US military.

Location:

Washington

Company Size:

20k+ employees

Service Provided:

GRC Advising and Roadmap; Audit Prep & Compliance Mapping

Time from Start to Completion:

9 months
